

Maintenance of your wastewater system

WHY DOES MY OZZI KLEEN NEED SERVICING?

The Ozzi Kleen sewage system is a single tank treatment plant using a cyclic, aerobic treatment process, designed to treat all your household wastewater.

All local authorities require all types of domestic sewage treatment plants to undergo regular servicing and testing.

The Ozzi Kleen RP10 wastewater treatment process is factory precision-set to give reliable operation.

A periodical 3 month service is to be performed by an Ozzi Kleen RP10 qualified service personnel. At this time a range of performance and water quality tests are performed. Just like a car requires servicing – so does your Ozzi Kleen RP10 to ensure safe and efficient operation.

A report of this service is required to be sent to your local authority. A maintenance log book is kept in the control box of the Ozzi Kleen RP10 sewage treatment system to record the history of the system, both for the owner's and the service person's reference.

Ozzi Kleen Servicing Facts

Ozzi Kleen wastewater treatment systems are unique in that there are no septic processes used in treatment. The Ozzi Kleen wastewater system is completely aerobic which allows you to use most off the shelf disinfectants and cleaners in your household.

Suncoast Waste Water Management, manufacturers of Ozzi Kleen Water and Waste Water products, conducts in-house training courses to Service Providers who are issued with an OZZI KLEEN GREEN CARD which is to be renewed every two years.

To keep your system in a healthy condition we have listed below certain criteria for the servicing of your Ozzi Kleen treatment system.

- A standard Ozzi Kleen RP10 service in total takes approx 45 minutes
- The SV30 test is a settling test to determine the sludge levels in your system
- The mesh basket is to remain in the effluent chamber after cleaning and placed back on hook provided
- The effluent chamber is to be pumped out (and cleaned) back into the main aeration tank
- Motor box & chamber lid fittings must be secure for safety reasons
- The decanting head should always remain level
- Only approved Ozzi Kleen parts should be installed in your system
- Air Blower filter is to be removed and cleaned at every service
- Main tank walls and fittings should be washed down at every service, if permitted

If you have any queries or questions about your system or its regular servicing, please contact us.

HOW DO THESE SERVICES BENEFIT ME?

Although required by your local authority, your 3 monthly services in many ways offer you a "Preventive Maintenance Schedule", which can help improve equipment life and avoid any unplanned maintenance activity helping to minimize breakdowns and excessive depreciation. In its simplest form your 3 monthly services can be compared to the service schedule for a car.

WHAT COSTS ARE INVOLVED?

As the tests that are required to be performed differ from state to state, and local authority, please check the service fee and cost of chlorine (and Aluminum Sulphate if you have an advanced secondary system) with your local Green Card accredited service agent. If you have any queries please feel free to contact us on 1800 030 266 or 0429805066.
